

IT Solutions for Financial Institutions

Keeping up with daily operations while streamlining processes, reducing costs, and meeting regulatory requirements is enough to challenge any IT department. Whether it is managing your day-to-day IT operations, upgrading your technology infrastructure or leveraging technology to help you connect with your members, we bring together our knowledge of core processors and industry leading technologies to deliver risk-free, innovative IT solutions.

Managed Services

We collaborate with your IT staff to help as much or as little as needed, providing patch management, online backups, desktop support, tiered help desk, and complete IT managed services.

Cloud Migration

Migration of critical systems to Microsoft Azure and Office 365 platforms based on a thorough understanding of the NCUA guidelines and regulatory requirements.

Comprehensive Security

Detailed risk assessment including internal and external vulnerability testing. Continuous security monitoring analyzes and securely stores logs from critical devices.

Core Conversion & Project-based Work

Project-based support for core migrations, software upgrades, server room reconstruction, office moves, WAN conversions, and large-scale workstation replacements.

Web & Application Development

Complete range of web and application development services, including web strategy, content management and support that help you deliver the best web and application experience.

Managed Hosting

Dedicated cloud hosting solutions designed to deliver high availability for your website, databases, key applications, and file servers.

Network Infrastructure Assessment

Full network review with telecommunications analysis plus external penetration testing and monitoring to ensure that your network is well-protected and compliant.

Technology Strategy & Consulting

Fine-tune your IT strategy with comprehensive long-term IT plan and budget. Support with RFP writing, IT audit preparation, and technology conversions.

Compliance & Privacy

Managing your organization risk to acceptable levels and protecting the confidentiality, integrity, and availability of your information and information systems.
