

Modernize Your Organization's Vulnerability Management with Around- the-Clock Managed Detection and Response

American Technology Services (ATS) offers Threat Hunting and Response (powered by the fastest MDR in existence, SentinelOne).

Utilizing a multi-vector approach, the SentinelOne platform uses patented technology to keep organizations safe from threats.

The ATS Security Operations Center operates 24 hours a day, seven days a week with dedicated security analysts to triage and prioritize events based on your organization's needs.

The ATS MDR solution combines industry-leading endpoint detection and response technology with around-the-clock staffing of dedicated security experts to remediate threats in real-time and launch investigations aimed at root cause analysis.

Refocus attention and resources on strategy while ATS' cybersecurity experts review, act upon, and log every product-identified threat that puts your network at risk.

SentinelOne MDR Key Benefits

THREAT PROTECTION & INTELLIGENCE

Endpoint Threat Active Protection
Security Operations Center
Global Endpoint Monitoring
Dynamic Endpoint Threat Intelligence

VISIBILITY & DATA AGGREGATION

Endpoint Visibility

VULNERABILITY & COMPLIANCE DATA

Software Vulnerability Scanning

How SentinelOne Works

1. Threat Detected
2. Analyst Classification
3. Threat Insight
4. Threat Mitigation
5. Proactive Escalation as Needed

Platform Features

ENDPOINT SECURITY
