# CTEM in Action The Five Stages of Risk Management

## Scoping

Define the organization's attack surface by identifying critical assets, high-risk areas, and strategic priorities.

#### **Prioritization**

Assess the likelihood and impact of threats to focus on addressing the most significant risks first.

#### **Mobilization**

Act on findings with a streamlined, collaborative approach that involves all stakeholders, ensuring faster remediation and continuous improvement.

## **Discovery**

Use advanced tools to uncover hidden vulnerabilities, misconfigurations, and potential exploit paths across your infrastructure.

### **Validation**

Test your defenses through simulations and penetration testing to ensure vulnerabilities are accurately identified and mitigated.
